Medication Distribution

MEDICATION DISTRIBUTION SYSTEM MVS-E01

Current studies show that conventional processes in hospitals and nursing care homes pose a real safety risk. Prescription errors lead to contra-indications, cross-reactions or medical reactions. When arranging medication, the possibility of mistakes concerning the dosage and the amount is evident. However, the quality of the medication distribution depends on the correct identification of preparations and patients.

Our medication distribution system helps to reduce these mistakes and offers several risk minimising solutions.

Daily dispenser

The convenient daily dispensers can be printed with the distribution periods (morning, lunch, etc.). The possibility of sticking a piece of paper with the patient's name and the weekdays is another safety factor. The filled daily dispensers can be placed into the distribution tray, weekly tray or weekly box.

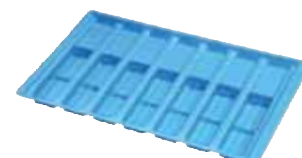

Distribution tray

The aim of the distribution tray is to guarantee the secure medication distribution. The grooves and hollows allow the positioning of dosage beakers which do not shift.

Week tray - preparation for a whole week

Depending on the doctor's prescription, care homes often prepare medication for a whole week. The seven dispenser trays are available in different sizes to fit the daily dispensers.

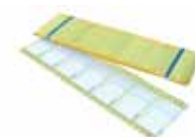

Week box

As an alternative to the trays, daily dispensers can be carried in a week box.

Labels - distribution safety

Printable labels allow a detailed description of dispensers with names of the patients, distribution day, time, etc.

Daily Dispensers

Safety thanks to overview!

Cabinets filled with medication-, to be taken at different times over the whole day: that is the routine of patients who have to take drugs several times a day. The uncertainty of taking the wrong medication is constantly present all the time.

Daily dispensers are a huge relief for patients. Clearly arranged medication means fewer mistakes. Daily dispensers are available in different sizes and with different division possibilities.

The filled daily dispensers can be stored and handed out to patients in the distributiontray or weekly tray.

1

Advantages

- Clearly arranged
- Fits into different distribution systems
- Safety
- Different models
- Fixed or variable divisions
- Inscription with labels
- Perfect space-saving storage for patients
- Dishwasher-able

Alternately, the dispensers can be placed into a week box. Available in two sizes.

140 x 55 x 230 mm
140 x 85 x 230 mm

Safe arrangement

It's so easy!

"Safety with little effort" is the motto for firstly choosing the dispenser best suited for the needs of your patients.

Then, the fitting weekly set is chosen and finally the suitable distribution tray. This way you will get a clear distribution structure; even if the then when die medication of your patients varies a lot

Arrange, storing and distributing

It's so easy!

Arrange

Based on the doctor's prescription, the medication of each patient for one week is arranged in each daily dispenser. The weekday, on which the empty week dispenser are newly arranged, will be duplicated to prevent a supply gap.

1

2

Patient-oriented storage

The week trays fit with seven dispensers in both cabinets as well as in trollies. A compact storage of all medications and supplies in the nurse's room creates space and increases the efficiency in work processes.

Secure Distribution

Medication can be distributed quickly and reliably with the dispensersystem of Wiegand to the residents or patients. This saves valuable time for essential things, and reduces the risk of medication errors.

3

Additional equipment for even more safety

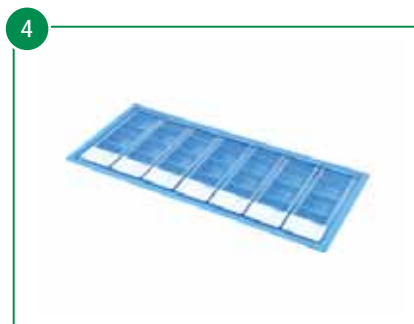

Dosage beakers

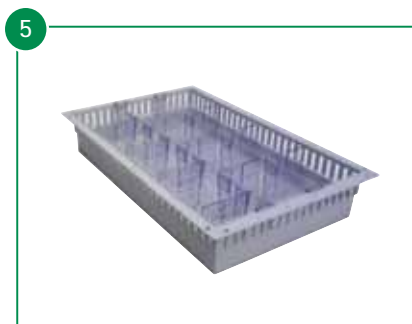

Washing basket with insert

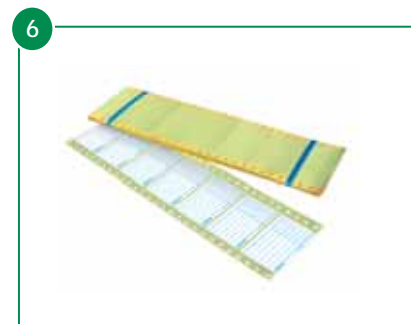

Storage units

Ready-to-use weekly sets

Modular tray system

Labels

Medication dish for dispenser no. W61

Blister box

Tablet separator

All additional equipment can be used flexibly and meets high medical quality standards. Many additional offers for the elderly simplify the intake of medication, also at home. Please contact our sales team for a complete list of the available items.
