Medication, ampoules, bandages

Organisation in the Cart

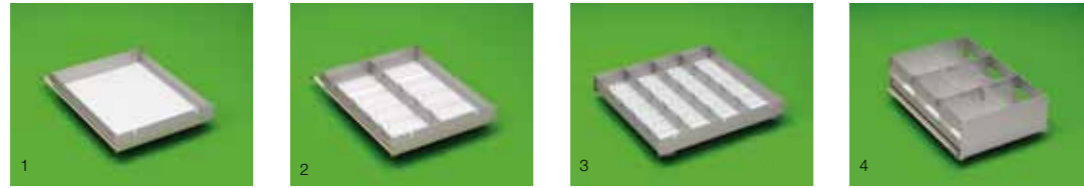

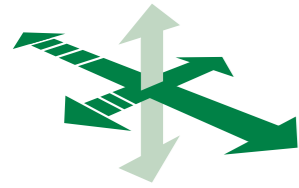

CART FW-E01

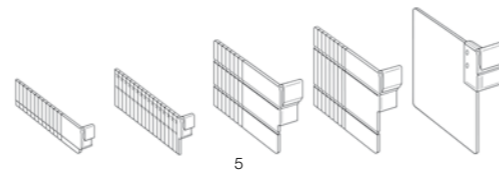

For perfect organisation in the cart **H+H SYSTEM** believes it is essential for medications, ampoules, bandages and small items to be clearly visible in their own space-saving compartment. The flexible dividing system allows simple and rapid changes to react to the daily changing need for costly space.

H+H SYSTEM also shows flexibility through the easy implementation of the different organisation systems in all carts. We offer specifications of any size, modular trays in ISO and DIN standards and customised solutions made of plastic or aluminum. Our flexible dividing system can also be easily installed afterwards in any cart, whether drawer, bin or modular tray.

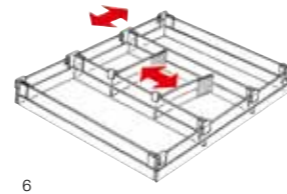

Dividers in 5 different heights

H+H dividing system comes in different configurations and is available in 5 different heights.

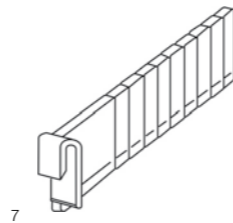

Every dividing configuration possible

The combination of aluminum rails and flexible dividers offer an optimal division for every stored product. The result is the optimal usage of the existing space.

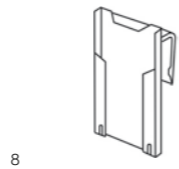

Flexible dividers (easily moveable)

The flexible dividers are clipped on the rail and positioned against the product. Integrated breakpoints allow the division of individual products.

Card holders - integrated or clip on

Integrated or clip on label holders are available. Label holders are used for identification and with the double cardsystem for easy reordering.

Highest stability

For the storage of heavy products (bottles, ...) an opposite clip can be used.

The intelligent organisation system

Up to 30% space gain

Drawer Inserts

Drawer Retrofit

Drawer Tays

Modular Trays

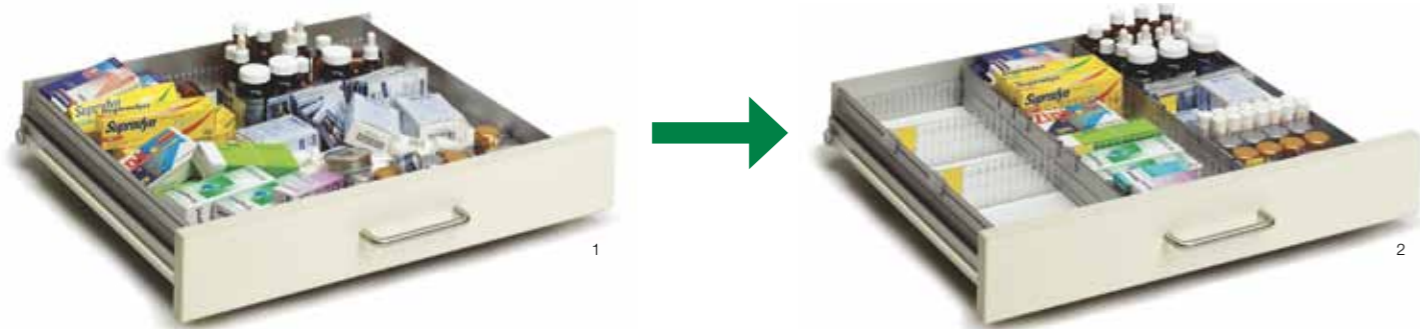

Examples shown can be combined as required.

More space within the same dimensions and all perfectly visible

The best possible use of the available space is a crucial factor for H+H SYSTEM. Another factor is a perfect overall view – this allows items to be found quickly and reduces the risk of confusion.

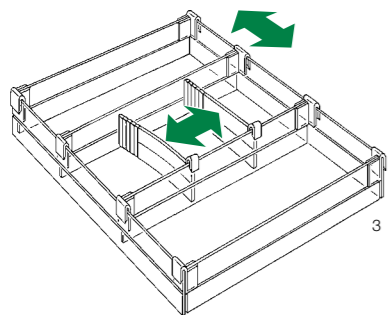

- Up to 30% space gain
- Perfect overall view
- Items can be found quickly
- Reduced risk due to less confusion
- Quick reaction to changing space requirements
- Easy cleaning

■ Disorder takes up valuable space and means items are difficult and time-consuming to find.

■ With H+H SYSTEM you can save up to 30% space and gain a better overall view

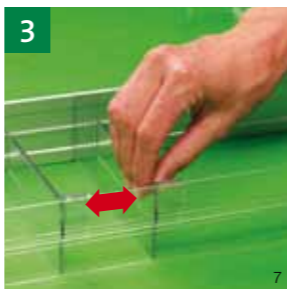

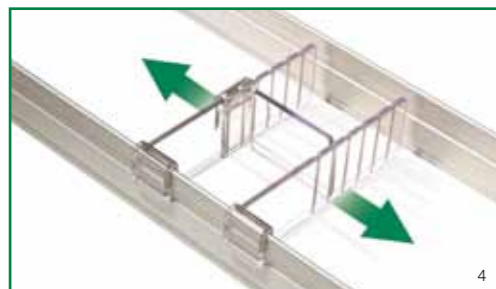

High quality dividing system with maximum flexibility

The flexible H+H sliding dividers can be pushed right up to the packages so that no space is lost. More space means more items. The ends can be moved at will so even the smallest packs can be taken out.

This is how to do it: break the flexible dividers to the desired length, clip in place and slide them up and down as required.

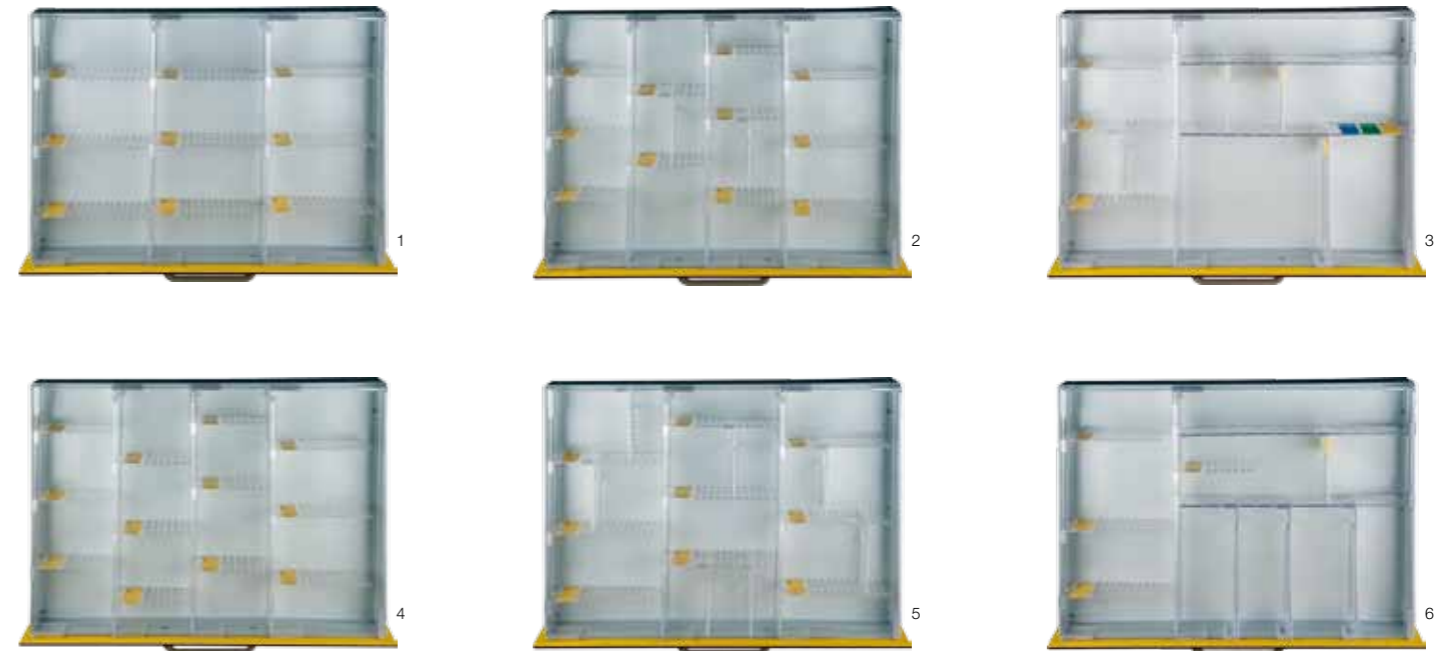

Adjustable, dividable – as often as you like

Solutions from the innovation leader

H+H SYSTEM has been involved on a daily basis for more than three decades with intelligent solutions for clear-view space-saving storage of medication, bandages, accessories and small parts of all kinds. Our experience and know-how, the result of continuous development of all our systems, is invested in all our dividing and organisation systems. This results in a system that matches every demand.

Examples of H+H modular tray dividing system

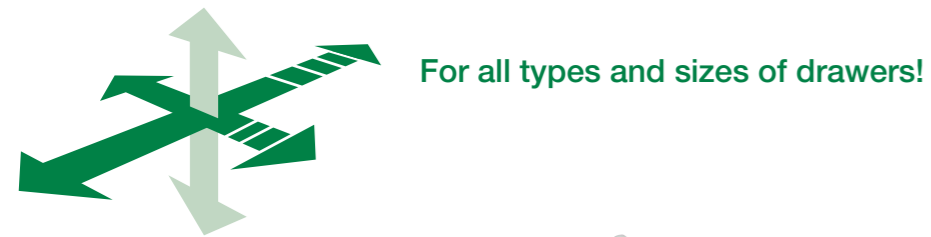

Drawer Inserts

Optimum customised use

The **H+H SYSTEM** inserts are customised for individual requirements. The advantage of a complete insert is obvious. You can take out the whole insert in one piece for easy, hygienic cleaning.

Drawer inserts are available in plastic or high quality aluminum. Choose between the flexible, easily adjustable version and a stable version for heavy items. All types are available dismantled or preassembled.

For all types and sizes of drawers!

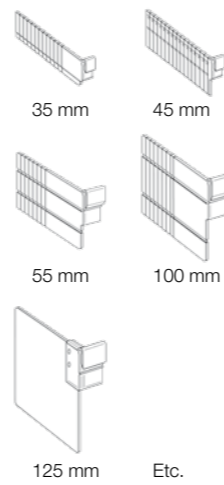

Advantages

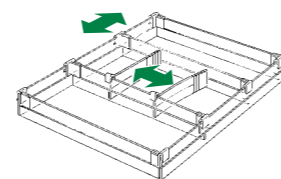

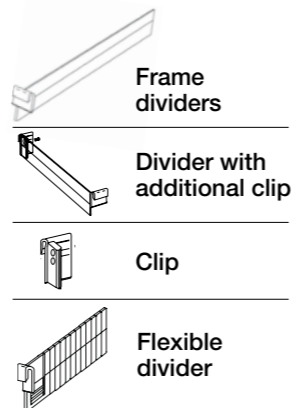

- Can be removed all in one piece
- Customised
- Hygienic cleaning
- Perfect overall view
- Flexible dividing
- Simple handling
- Labelling possibility

Drawer Retrofit

Easy to add and flexible divided

Adjusted exactly to each dimension, the **H+H SYSTEM** can afterwards be divided for each cart load depending on different requirements, whether it is a drawer, bin or modular tray.

The drawer retrofit system consist of only three different parts – assembly is easy. First the slotted rail holder with its ready-applied adhesive strip is cut to size and stuck to the inside of the drawer. The rails and flexible dividers are then put in place as required. The drawer can be divided up within a minute and the contents can be seen clearly accommodated with no wasted space.

For all types and sizes of drawers!

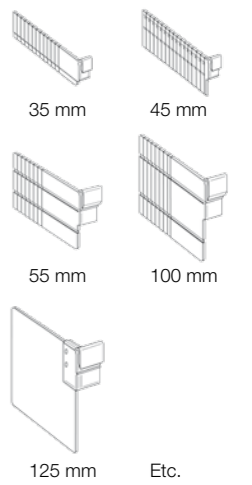

Advantages

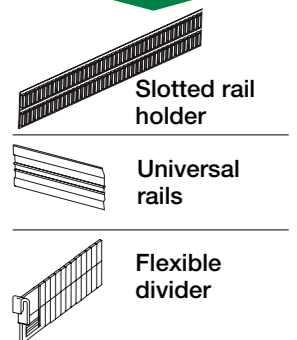

- Perfect overall view
- Individually adjusted
- Flexible dividing
- Simple handling
- Hygienic cleaning
- Labelling possibility
- Suitable even for heavy loads

Drawer Trays

Individual and flexible

H+H SYSTEM trays and boxes are available in all sizes and customised. They can be used for all sorts of tasks – from work preparation to sorting to interim storage to transport. To maintain safety standards they are also available with a lock or with sealable cover.

The leak proof trays are especially suitable for the 'Exchange Tray System' popular in the USA – the trays can be quickly removed from the drawer and be exchanged.

For all types and sizes of drawers!

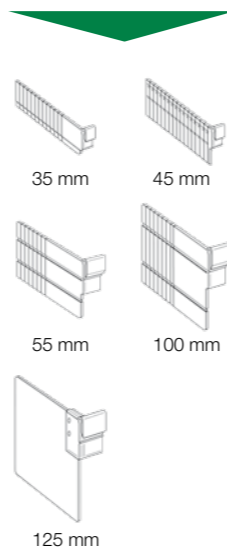

Advantages

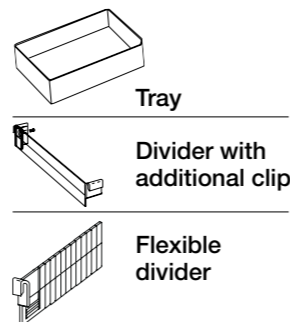

- Leakproof
- Great safety
- Perfect overall view
- Flexible dividing
- Labels for medication location
- Various styles and materials
- Any size
- Patient-ready storage in minimal space

Modular trays in ISO format (600 x 400 mm)

Standardised but flexible

The modular tray system of H+H SYSTEM is the perfect solution for patient-ready storage of medication for all ISO trolleys. The combination of fixed cross recess dividers and flexible dividers makes it possible to adjust the compartment to the item being stored. If space requirements change, the set-up can be quickly and easily altered. That means the greatest possible gain in space with the greatest handling efficiency.

Choose between two supporting systems:

- Telescopic runners – modular trays remain easy to move and there is no space loss when the drawer is pulled out. We also offer a full frame for assembly of the front.
- Side panel – the modular trays are easily pushed in and the small distance between the ribs provides high-density tray storage. With a special pull out-stopping design, which allows a straight and hinged drawer stop (2 in 1).

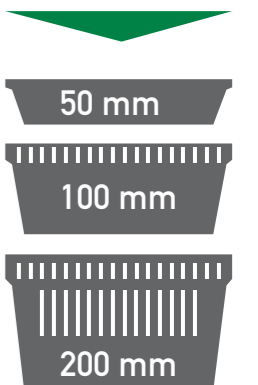

Advantages

- Flexible dividing
- Can be adjusted as space requirements change
- Lane width can be adjusted every 10 or 20 mm
- High stability as a result of the „ClipOn“ effect
- Labelling possibilities
- On telescopic runners or side panel
- Various materials (ABS, PC)
- Dishwasher safe
